

MOVICAM - Analysis of Mobility in Canaries, Azores and Madeira

(Ref. MAC/2.1/C8)

Characterization:

The Moviecam project aims to study the mobility of passengers between the Azores, Madeira and the Canary, highlighting the links between these islands, as well as between the islands and the mainland. The analysis allowed to characterize the transport demand in these three regions and identify the potential for development of transport initiatives geared to tourism between the different islands.
